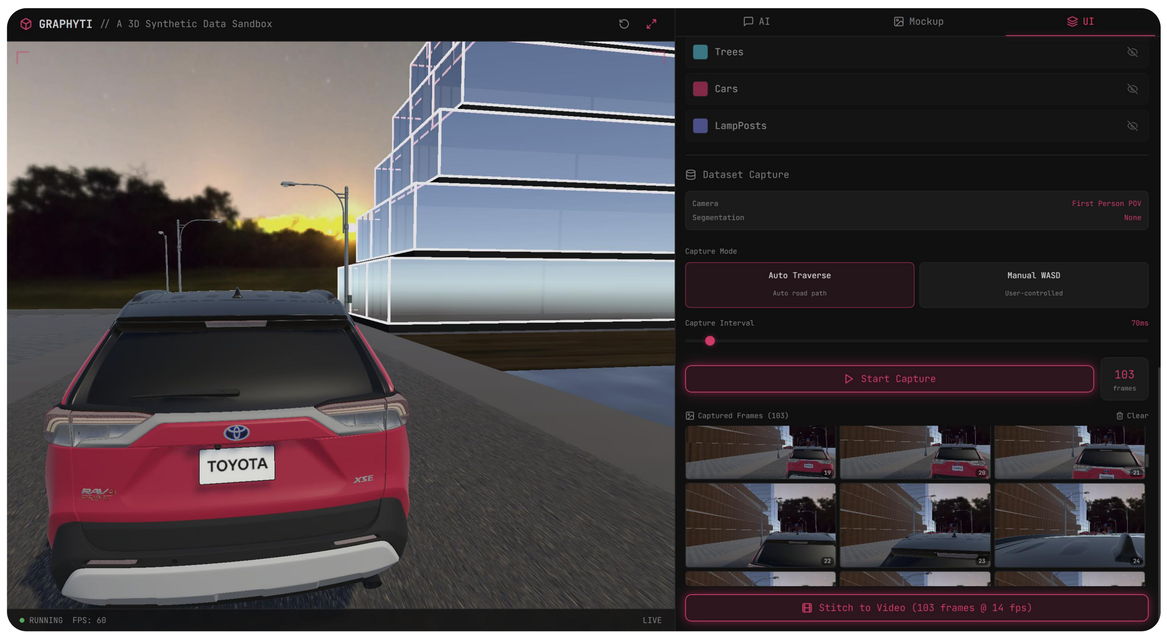
Team Graphyti

Market Potential

Graphyti operates in the fast-growing synthetic data and interactive world model market, driven by demand from robotics, autonomous systems, embodied AI, next-gen computer vision and entertainment. As **real-world data becomes costly, scarce, and legally constrained**, **synthetic 3D data is becoming essential** infrastructure. The long-term opportunity spans multi-billion-dollar AI training budgets globally.

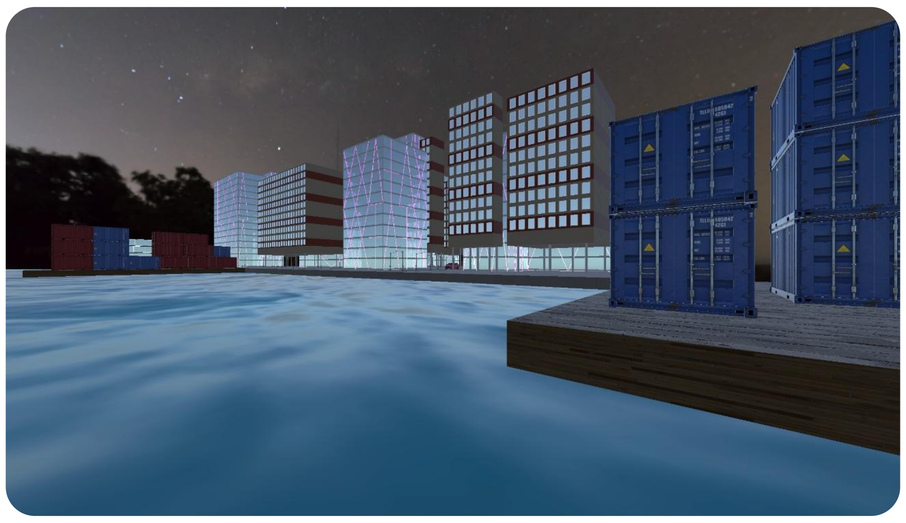
Target Users

Primary users are AI research labs, robotics companies, autonomous vehicle teams, defense/simulation firms, and foundation model developers that require large-scale, controllable, and fully annotated visual data. Secondary users include computer vision startups, academic labs, and game/simulation studios.



Unique Value Proposition

Graphyti delivers **on-demand, fully controllable 3D synthetic datasets** through an end-to-end pipeline combining in-house deterministic procedural generation algorithms, AI copiloting, automated camera capture, and ground-truth annotation. Unlike competitors relying on scraped or static media, Graphyti produces **original, copyright-safe, spatially coherent data at scale**, dramatically reducing cost and time to dataset creation.



Innovation Impact

Graphyti accelerates the development of spatially intelligent AI by removing the data bottleneck. It enables faster robotics learning, safer autonomous systems, and more robust world models while reducing dependence on expensive real-world data collection.

Potential Users

AI Research	Entertainment	UOB Venture Portfolio companies
Google Deepmind World Labs HTX	Netflix Disney	Venti WiMi Hologram
