

Point at one photo. Reskin the entire world.

Drop in any image as a style reference. Graphyti derives a custom shader from it — then applies that look consistently across every surface in the scene, not just one object.

DERIVE SHADER

BUILDINGS

ROADS

FOLIAGE

WATER

SKY & LIGHTING

One tile becomes a **world without edges.**

Every generated scene is a tile on a grid. Because generation is procedural and tileable, Graphyti keeps stamping neighbouring tiles outward — same rules, seamless seams — growing a world of any size.

∞

EFFECTIVE WORLD SIZE

0

VISIBLE SEAMS

- Tiles stream in on demand — memory stays flat as the map grows.

Need a specific object? Generate the 3D asset.

Beyond whole scenes, prompt an individual asset — a specific vehicle, a species of tree, a piece of street furniture — as true geometry with materials and collision, dropped straight into the world.

PROMPT

"A weathered delivery van, right-hand drive"

VEHICLES

Cars, vans, bikes — make, wear, variant.

FLORA

Trees, shrubs, ground cover by species.

FURNITURE

Lamp posts, benches, signage, barriers.

PROPS

Clutter, debris, cargo — the edge-case junk.

OUTPUT → Mesh + materials + collision, auto-labeled and ready to place.
